THE EUROPEAN COMMISSION INCREASES SUPPORT FOR THE EU BEEKEEPING SECTOR

In 2018, the EU had over 17.5 million hives divided over 600,000 beekeepers. Beekeeping is practiced in all EU Member States and the European Union is the world's second largest honey producer. Honeybee colonies are essential for agriculture and environment, ensuring plant reproduction by pollination, while beekeeping participates to the development of rural areas.

The European Commission will provide €120 million to the EU's beekeeping sector over the next three years to support its essential role in agriculture and the environment. This represents an increase of €12 million compared to the support provided for the period from 2017 to 2019.

EU Commissioner for Agriculture Phil Hogan said: "Beekeeping is an important part of the EU agri-food sector, helping to keep jobs in our rural areas. Bees are also vitally important for the sustainability of our agriculture and for healthy ecosystems. Therefore it is to be welcomed that the Common Agricultural Policy, working in synergy with other key European and national funds, is now providing stronger tools to support the sector." The EU support, doubled by contributions from Member States, will apply to national apiculture programmes starting on 1 August 2019 and running until 31 July 2022. These programmes are designed at national level in cooperation with the sector with the aim to improve the conditions for the apiculture sector and the marketing of their products. Measures include for example education to beekeepers, support to start a beekeeping business, fighting against parasites damaging hives, and research or measures on improving honey quality.

PROJECT VICINAQUA: MAKING FISH FARMING IN EASTERN AFRICA'S LAKE VICTORIA SUSTAINABLE

EU-funded researchers have developed a system that helps fish farmers in Lake Victoria while also protecting the environment.

Overfishing, water shortages and pollution – these are just some of the environmental problems Lake Victoria has been facing over the last few decades. Bordered by Kenya, Tanzania and Uganda, the world's second largest freshwater lake provides the main source of income for the populations living around the Lake Victoria basin. However, the environmental pressures put on the lake have seriously compromised fish farmers' livelihoods.

The EU-funded VicInAqua project developed a model for more environmentally friendly, sustainable aquaculture that helps fish farmers maintain their livelihoods. Their model was based on recirculating aquaculture systems (RASs), a technology for farming fish that minimises pollution while also securing a higher and more stable fish production with fewer diseases.

As part of the project, a pilot RAS hatchery running mainly on renewable energy was constructed in Kisumu, Kenya, in early 2019. The facility was developed for hatching tilapia, a freshwater fish that has been very important in traditional, small-scale fishing in Africa and, more recently, in aquaculture. The hatchery had a twofold purpose: it served as a demonstration and training facility, and provided fish farmers with high-quality fingerlings (juvenile fish that have developed scales and working fins). The first fingerlings were distributed to farmers in April.

VicInAqua (Integrated aquaculture based on sustainable water recirculating system for the Victoria Lake Basin (VicInAqua)) concluded in May 2019. However, the pilot hatchery will continue to be used by DALF, Kisumu County, as a training and demonstration facility to boost aquaculture in the region and increase awareness, knowledge and skills among fish farmers.

STILL NO CURE FOR XYLELLA PLAGUE CONTROL MEASURES CRUCIAL

Xylella fastidiosa is one of the most dangerous plant bacteria in the world. It causes a wide range of diseases, with a huge economic impact on agriculture, gardens and the environment. The four most commonly reported subspecies are *fastidiosa*, *pauca*, *multiplex* and *sandyi*.

EFSA has updated its assessment of the risks posed by *Xylella fastidiosa* to plants and crops in the European Union. The new assessment provides new insights and conclusions on controlling existing outbreaks of this pest and preventing further spread in the EU.

The EFSA Technical Phytosanitary Commission used computer models to simulate how *X. fastidiosa* spreads over short and long distances under different conditions. The modeling showed the importance of applying control measures, such as those specified by the European Commission, to prevent further spread and even eradicate outbreaks.

In addition, the relative effectiveness of using buffer zones of different sizes to control an infected area was illustrated. The simulations also demonstrated the importance of controlling the insects known to transmit the pathogen in Europe - such as the *Philaenus spumarius* - and of minimizing the delay between the detection and the application of control measures such as the elimination of infected plants and the establishment of demarcated areas.

The evaluation confirms that it is not yet known how to eliminate bacteria from a diseased plant in field conditions. The effectiveness of chemical and biological control measures has been evaluated in recent experiments.

INVESTIGATING THE LINK BETWEEN FOOD AND DEPRESSION

It is thought that people with obesity have an increased risk of developing depressive symptoms and depression. MoodFOOD conducted the first trial to directly test the impact of a food-related behavioural therapy alongside a multi-nutrient supplement on the prevention of depression.

According to a recent Eurostat study, obesity rates for the 19 European Member States for which data was available range from 8.0 % - 23.9 % for women and 7.6 % - 24.7 % in men (Eurostat 2011). Alongside this, the WHO has calculated that each year about 7 % of the European population suffers from a major depression - making it one of the most prevalent disorders in the EU. This places a heavy burden on individuals, families and society as a whole.

MoodFOOD looked at the links between the two disorders to ask whether improving food-related behaviour and nutrient intake could help prevent depression, specifically for people prone to being overweight.

Based on a large number of studies and careful analysis, the researchers came to three conclusions:

- A healthy diet - high in fruit, vegetables, whole grains, fish, pulses and olive oil, and low in red meat and full-fat dairy products - may reduce the risk of developing depression.
- In people with obesity, weight loss can lead to a reduction in depressive symptoms.
- Current evidence does not support the use of nutritional supplements in order to prevent depression.

EUROPEAN INSTITUTE OF INNOVATION AND TECHNOLOGY: THE COMMISSION PROPOSES A STRATEGY FOR 2021-2027

The European Commission has proposed an update of the legal base of the European Institute of Innovation and Technology (EIT) as well as its new Strategic Innovation Agenda for 2021-2027.

The EIT is an independent EU body created in 2008 that is strengthening Europe's ability to innovate. The proposals adopted today will align the EIT with the EU's next research and innovation programme Horizon Europe (2021-2027) delivering on the Commission's commitment to further boost Europe's innovation potential.

The Strategic Innovation Agenda proposed for 2021-2027 is designed to achieve the following goals:

- Increasing the regional impact of Knowledge and Innovation Communities
- Boosting the innovation capacity of higher education
- Launch of new KICs

The revised EIT Regulation ensures greater legal clarity and alignment with the EU Framework Programme for Research and Innovation. The new legal base also introduces a lean and simplified funding model for the EIT designed to more effectively encourage additional private and public investment. Finally, it reinforces the EIT's governing structure.

The European Institute of Innovation and Technology was established in 2008 by Regulation (EC) No 294/2008 amended by Regulation (EC) No 1292/2013 and is based in Budapest. Its purpose is to address major societal challenges by improving the innovation capacity and performance of the EU through the integration of the knowledge triangle of education, research and innovation..

SAGE PROJECT: HOW TO IMPROVE FEMALE PARTICIPATION IN RESEARCH

An EU initiative has published a letter with the aim of increasing female participation in research and promoting gender equality, that women are not sufficiently represented in decision-making positions in political, business and research institutions. It is something well known and according to a news item published by Eurostat, in 2017, of the nearly 18 million scientists and engineers in the EU, only 41% were women.

The difference in pay between women and men is another problem for them, who on average earn 16% less than men across the EU. In addition, harassment and gender violence are widespread. Universities can play an important role in addressing imbalances between men and women, and increasing equality. The SAGE project, financed with European funds, addresses exactly this issue in its search for stronger measures on gender equality in higher education and research.

Increasing the participation of women in research, and promoting gender equality, is vital in strengthening the competitiveness of European research.

With the participation of seven universities in Europe, SAGE has created a model to improve gender parity in research organizations. As explained in a press release from Trinity College in Dublin, in the framework of the project, a letter was recently published that aims to promote gender equality in the higher education sector. Signed by Trinity College in Dublin, the letter is going through other European universities. Among other objectives, it promotes the improvement of gender parity at all levels of the academic field, in addition to the balance between working life and private life, and the eradication of school and sexual harassment.

THE EU INVESTS 50 MILLION EUROS TO CREATE A NETWORK OF CENTRES OF EXCELLENCE IN ARTIFICIAL INTELLIGENCE

The European Commission has launched a new call for proposals to develop a European network of centers of excellence in artificial intelligence with the aim of improving cooperation within the European Artificial Intelligence (AI) research community and promoting technological advances in the field of the IA. Through this call, which is part of the Horizon 2020 2018-2020 Work Program, the most rigorous research teams in Europe are encouraged to join forces to face the main scientific and technological challenges, which makes it difficult to deploy solutions based on AI. The first part aims to bring together leading researchers in European networks of centers of excellence that will work on key AI issues. Each network of researchers will choose an important scientific or technological challenge with industrial relevance to work.

The second part aims to promote coordination and exchange between the selected projects and other relevant initiatives. Priority is given to the development of doctoral programs, the integration of AI into curricula (even in non-digital courses) and the organization of practices.

In addition, greater cooperation with the industry is expected to foster an ecosystem of research and development resources, as well as experience and infrastructure in areas such as supercomputing, robotics equipment and the Internet of things.

INTEGRIDY PROJECT: SMART SOLUTIONS FOR ENERGY EFFICIENT BUILDINGS OF THE FUTURE

Climate change is causing Europe to transform its energy sector. In the coming decades, as we move from an economy based on fossil fuels to another without carbon emissions, we will increasingly use renewable energy and the electricity we will generate will not come from a power plant.

The Spanish project financed with European funds inteGRID and has launched ten pilot systems in eight European countries. It started in 2017 and focuses on responding to the demand for electricity by improving the operation of the distribution network, energy storage and intelligent integration of electric vehicles.

The results of one of the pilot activities carried out on the Isle of Wight in England offer more information on energy consumption and its impact on the environment. The objective was to verify whether a reduction in demand and energy consumption would affect the loads of industrial and commercial buildings on the island. For this, the Heights Leisure Center was chosen as a pilot building.

Another of the pilot activities, in this case in Thessaloniki (Greece), is focusing on better integrating new energy technologies and a smarter collaboration between them and the existing power grid.

The inteGRIDy (integrated Smart GRID Cross-Functional Solutions for Optimized Synergetic Energy Distribution, Utilization Storage Technologies) project will conclude in December 2020. Until then, it will continue to strive to optimize the operation of power grids, promote coordination of distributed energy resources and facilitate the establishment of collaborative storage systems for renewable energy.

EUROPEAN TECHNOLOGY ALLOWS A FAST AND SECURE TRANSFER OF DATA FROM SPACE TO EARTH

The European External Action Service and the European Commission organized last July a live demonstration of the European Data Relay System (EDRS), also known as 'Space Data Highway'.

The system is the world's first laser link in the sky, based on cutting-edge European laser technology. It allows to transfer a large volume of data, in particular images, from satellites in space to Earth almost in real time.

The system is a public-private partnership between the European Space Agency (ESA) and Airbus, with an allocation of 90 million euros of EU funds from the Copernicus Earth Observation program and ESA in the period 2015-2020. Thank you to the system, Copernicus images will be available up to 7 times faster than today. Copernicus, a leading provider of Earth observation data worldwide, offers high-quality environmental monitoring, helps save lives and manages emergencies, supporting maritime and border security.

These new services will help Copernicus increase the capacity and timeliness of data download and greatly improve its value for a large number of applications in critical time. The live demonstration was held simultaneously at the EEAS headquarters in Brussels, the European Maritime Safety Agency in Lisbon and the EU Delegation in Tokyo

DROUGHT IN EUROPE: MORE SUPPORT FOR EUROPEAN FARMERS

The European Commission has offered support to farmers in the face of drought waves that have plagued Europe. First, farmers will be able to receive a higher percentage of their direct and rural development payments in advance. Second, in order to feed their animals, they will be given greater flexibility to use land that would not normally be used for production.

In addition to the support available under the Common Agricultural Policy (CAP), two decisions have been made to help farmers:

- Farmers may receive higher prepayments. Until mid-October, up to 70% of your direct payments and 85% of rural development payments will be available to improve your cash flow situation.
- Exceptions to certain "greening" requirements will be allowed. These exceptions will apply to crop diversification standards and areas of ecological focus on fallow land.

The adoption of other types of "greening" repeal is also being considered in order to give farmers greater flexibility to produce fodder.

In addition to continuously assessing and analyzing the drought situation and its impact thanks to European satellites, the Commission is in contact with all Member States to receive updated information on the impact of drought on farmers at the local level.

BALTIC SEA: IMPROVED LONG-TERM SUSTAINABILITY OF STOCKS

The European Commission has adopted a proposal for fishing opportunities by 2020 for commercially important fish stocks in the Baltic Sea: Based on the latest scientific advice available, the Commission proposes to increase fishing opportunities for herring in the Gulf of Riga and maintain the same levels for salmon in the Gulf of Finland. For the remaining stocks covered by the proposal, the Commission proposes to reduce fishing opportunities.

The total allowable catches (TAC) proposed are based on the scientific advice of the International Council for the Exploration of the Seas and follow the multi-annual Baltic management plan adopted in 2016 by the European Parliament and the Council. Fishermen's efforts, industry and public authorities have managed, in recent years, to rebuild important populations in the Baltic Sea.

However, scientists have discovered that the situation was less stable than previously estimated.

Therefore, decisive action is needed to rebuild all stocks and ensure that they grow or remain at sustainable levels, in line with the RMS. The Council will now examine the Commission's proposal, in order to adopt it during a ministerial meeting of the October 14 to 15.

Key words: beekeeping, protected species, insect, honey, pesticide, EU environmental policy, wildlife protection, flora protection, health risk.

EXISTING SCIENTIFIC EVIDENCE OF THE EFFECTS OF NEONICOTINOID PESTICIDES ON BEES

Summary: Reports about bee colony losses and damage have increased in recent years all over Europe. Neonicotinoids, a class of systemic insecticides, are more frequently associated with the pollinator declines. The present briefing note gives an overview about neonicotinoid uses and recent scientific findings on their impact on bee colony survival and development. Risk-mitigation measures aimed at protecting non-target organisms (such as bees), are outlined and discussed.

Publication date 23-05-2019

Author: Directorate General for Research and Innovation (European Commission); Group of Scientific Advisors of the European Commission.

ISBN / ISSN: 978-92-79-82006-9

Link: [CLICK HERE](#)

Key words: sales authorization, environmental impact, insect, scientific research, environmental research, research method, pesticide, environmental protection, toxic substance

HONEY MARKET PRESENTATION: CMO 17 APRIL 2019

Summary: This publication presents a visual and dynamic summary of the current situation of the honey market in the EU.

Publication date: 17-04-2019

Author: Directorate General for Agriculture and Rural Development (European Commission)

ISBN / ISSN: S/N
